

## ADSA Session – 5

### Bit Manipulation:

Normally we use 6 bit-wise operators

& - Bitwise AND

| - Bitwise OR

|

^ - Bitwise XOR

<< - Bitwise Left Shift

>> - Bitwise Right Shift

~ - Negation

- **These are used to perform operations on Bit level**

Take an Example:

Int a = 97;

Take the binary of 97 by taking LCM of that number.

These binary bits(1 , 0) are stored in memory location (array like)

&- bitwise AND

<b>B1</b>	<b>B2</b>	<b>B1&amp;B2</b>
<b>1</b>	<b>1</b>	<b>1</b>
<b>1</b>	<b>0</b>	<b>0</b>
<b>0</b>	<b>1</b>	<b>0</b>
<b>0</b>	<b>0</b>	<b>0</b>

a = 46 = 0 0 1 0 1 1 1 0

$b = 123 = 0\ 1\ 1\ 1\ 1\ 0\ 1\ 1$

$a \& b = 0\ 0\ 1\ 0\ 1\ 0\ 1\ 0 = 42$

Result : 42.

| - Bitwise OR  
|

<b>B1</b>	<b>B2</b>	<b>B1   B2</b>
-----------	-----------	----------------

<b>1</b>	<b>1</b>	<b>1</b>
----------	----------	----------

<b>1</b>	<b>0</b>	<b>1</b>
----------	----------	----------

<b>0</b>	<b>1</b>	<b>1</b>
----------	----------	----------

<b>0</b>	<b>0</b>	<b>0</b>
----------	----------	----------

$a = 46 = 0\ 0\ 1\ 0\ 1\ 1\ 1\ 0$

$b = 123 = 0\ 1\ 1\ 1\ 1\ 0\ 1\ 1$

$a | b = 0\ 1\ 1\ 1\ 1\ 1\ 1\ 1 = 127$

result : 127

^ - Bitwise XOR

<b>B1</b>	<b>B2</b>	<b>B1 ^ B2</b>
-----------	-----------	----------------

<b>1</b>	<b>1</b>	<b>0</b>
----------	----------	----------

<b>1</b>	<b>0</b>	<b>1</b>
----------	----------	----------

<b>0</b>	<b>1</b>	<b>1</b>
----------	----------	----------

<b>0</b>	<b>0</b>	<b>0</b>
----------	----------	----------

$a = 46 = 0\ 0\ 1\ 0\ 1\ 1\ 1\ 0$

$b = 123 = 0\ 1\ 1\ 1\ 1\ 0\ 1\ 1$

$a \wedge b = 0\ 1\ 0\ 1\ 0\ 1\ 0\ 1 = 55$

result : 55

**Task:**

$a = 87$        $b = 59$       Find  $a \& b$ ,  $a|b$ ,  $a^b$

$a = 01010111$

$b = 00111011$

$a \& b = 00010011 \sim 19$

$a|b = 01111111 \sim 127$

$a^b = 01101100 \sim 108$

Find -97?

$97 = 01100001$

$-97 = 10011111 \sim 2\text{'s complement of } 97$

**Important Conditions:**

If  $(n \% 2) -$

If  $n \& 1$  : if 1 – n is odd

If 0 – n is even

If  $n \& 0$  : 0

If  $n \& n$  : n

If  $(n | 1) -$

If  $n : n$  is odd

If  $n+1 : n$  is even

$n | 0$  : n

$n | n$  : n

if (  $n \neq 1$  ) -

    If  $n-1$ :  $n$  is odd

    If  $n+1$ :  $n$  is even

$n \neq 0$  :  $n$

$n \neq n$  : 0

Important Logic:
